

# IVETT & REED

## QUALITY SET IN STONE

615 Newmarket Road, Cambridge, CB5 8PA  
 Tel: 01223 213500 Fax: 01223 249150  
 Email: info@ivettandreed.co.uk  
 Web: www.ivettandreed.co.uk

**BELTRAMI LIMESTONE TILES**  
**RETAIL PRICE LIST**  
**1st JULY 2018**  
**PRICES INCLUDE VAT AT 20%**

### DELIVERY CHARGES

#### Pallet Courier with tail lift (NOTE - delivery to the kerbside only):

**Delivery to most of mainland UK:** £72 inc VAT per pallet (max 1,000kg per pallet - some orders will incur multiple charges)

**Additional small order packing charge:** £24 inc VAT (for orders of less than 10m<sup>2</sup>)

**Larger orders may be delivered by articulated truck with hi-ab crane (subject to location and access). Please contact us for details.**

### AVAILABILITY / LEAD TIMES

No tile stock is held at our Cambridge premises.

For products available from stock in Belgium, delivery can normally be made to a customer in the UK within 10 working days.

Lead times vary for production and special order items. Please contact us for more information.

### HOW TO ORDER:

**By telephone:** Call us on 01223 213500. A member of our sales team will be happy to discuss and process your order for you.

**By email:** Alternatively email us at info@ivettandreed.co.uk with details of the products required and your contact details.

**Material name:** ANTALYA CREAM  
**Stone type:** Limestone  
**Country of origin:** Turkey  
**Wear resistance:** ③ Medium - suitable for domestic and light commercial use - sealing recommended.  
**Typical appearance:** Light beige, almost even background with an occasional light flame and scattered darker fossils.

**Special notes:** Antalya Cream can crystallise at the surface before installation (rough feeling). This can easily be removed with a pumice or mechanically with a semi hard cloth. Before the grouting it is important to clean the tiles thoroughly and to slightly wet them afterwards. It is also recommended to grout small surfaces at a time and to clean the tiles immediately afterwards taking extra care with the tile edges. In general: do not use acidic products or too much water for the maintenance of Antalya Cream.

**Material name:** ASIAN BLUE (!!)  
**Pseudonyms:** Vietnamese Bluestone  
**Stone type:** Limestone  
**Country of origin:** Vietnam  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Sedimentary grey-blue limestone with black speckled background and white corals and shells here and there. Asian Blue is a good alternative to Belgian Bluestone. It is more uniform in colour and structure.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** Typical for this material are the little black markings on the upper surface that will come out after some time. This phenomenon is inherent to the structure of the material and does not depreciate the value/quality of the stone. Please note: the colour of the kerbs and the swimming pool surrounds can differ from the tiles or old paving stones.

**Material name:** CREME DO MOS  
**Pseudonyms:** Crema Bramos  
**Stone type:** Limestone  
**Country of origin:** Portugal  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Medium to dark beige background with scattered dark flecks and a clouded look.

**Special notes:** This material can show honing marks when held against the light. This is unavoidable and no complaints will be accepted. This stone has stylolitic veins that will come out after some time. The appearance is inherent to the structure and has no consequence whatsoever on the durability of the stone. Before the grouting it is important to clean the tiles thoroughly and to slightly wet them afterwards. It is also recommended to grout small surfaces at a time in order to avoid a cement film. In general: do not use too much water for the maintenance of Creme do Mos. This natural stone contains lime and must therefore be treated or cleaned with an acid-free product.

**Material name: GRIS CATALAN****Pseudonyms:** Caliza San Vicente**Stone type:** Limestone**Country of origin:** Spain**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.**Typical appearance:** A hard limestone, an excellent alternative to Belgian Bluestone with large grey-brown fossils and white shells.**Special notes:** Typical for this material are the little black markings on the upper surface that will come out after some time. This phenomenon is inherent to the structure of the material and does not depreciate the value/quality of the stone. Therefore it cannot give rise to any complaints afterwards.

**Material name: JININ STONE (!!)****Stone type:** Limestone**Country of origin:** China**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.**Typical appearance:** Oolitic dolomite rich limestone. The background colour is dark blue-grey.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** Due to the presence of dolomite, the stone will get a brown shine after a certain time. This natural stone contains lime and must therefore be treated or cleaned with an acid-free product.

**Material name:** JURA BEIGE  
**Stone type:** Limestone  
**Country of origin:** Germany  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Ochre-yellow-beige with natural glass or quartz veins and occasionally with a lot of fossils.

**Special notes:** The quartz veins, together with the other natural elements, are part of the structure of the stone and are certainly not a possible breakage line. The natural properties of the Jura Beige require that the preparation of the stone is done in stages. To that end it is necessary to improve the natural faults, such as pores, open holes and small quartz veins, by filling them with polyester resin and suchlike. This procedure is necessary to guarantee perfect product quality: in no way does it depreciate the value of the natural stone. Jura Beige is very sensitive to wet conditions (forming of stains is possible due to the rust discolouration caused by oxidation of pyrite).

**IMPORTANT:** Do not seal Jura stone tiles prior to installation, and do not spray the tiles with water before or after being laid. Jura is a very dense limestone. The joints between tiles must be left open for as long as possible (minimum 14 days in damp conditions) to allow the moisture from fixing adhesives to evaporate through these joints. Full installation guidelines available on request.

**Material name:** MAURYA GREY (!!)  
**Stone type:** Limestone  
**Country of origin:** India  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** A hard grey limestone.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** Maurya Grey is a stratified stone, therefore the edges lay notched to some extent. It is also possible that the surface scales off after being cleaned a few times; this ends once the hard core of the stone has been reached.

**Material name:** MIRABELLE  
**Pseudonyms:** Mirabelle Moca Crème (cross cut)  
**Stone type:** Limestone  
**Country of origin:** Portugal  
**Wear resistance:** ③ Medium - suitable for domestic and light commercial use - sealing recommended.  
**Typical appearance:** Light beige clouded background with light grey specks.

**Special notes:** This material contains small holes that can be filled up during grouting. This phenomenon is inherent to the material and therefore it cannot give rise to any complaints afterwards. Before the grouting it is important to clean the tiles thoroughly and to slightly wet them afterwards. It is also recommended to grout small surfaces at a time and to clean the tiles immediately afterwards taking extra care with the tile edges.

**Material name:** PERLATO OLYMPO (!!)  
**Pseudonyms:** Daino Reale  
**Stone type:** Limestone  
**Country of origin:** Italy  
**Wear resistance:** ⑤ High - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Light cream coloured to brown background, with some brown-beige veining here and there (sometimes very ornate).

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** The natural properties of the Perlato Olympe require that the preparation of the stone is done in stages. To that end it is necessary to improve the natural faults, such as pores, open holes and small quartz veins, by filling them with polyester resin and suchlike. This procedure is necessary to guarantee perfect product quality: in no way does it depreciate the value of the natural stone.

**Material name:** PIERRE DE BOURGOGNE  
**Stone type:** Limestone  
**Country of origin:** France  
**Wear resistance:** ③ Medium - suitable for domestic and light commercial use - sealing recommended.  
**Typical appearance:** Limestone with creamy-brown background with beige to brown shading and characterized by little black shells.

**Special notes:** This material contains small holes that can be filled up during grouting. This phenomenon is inherent to the material and therefore it cannot give rise to any complaints afterwards. Little and/or bigger open veins can appear with this material, which are commonly mistaken for filled up breakage lines by the inexperienced. This is a natural phenomenon: the stone is one solid mass with the veining. The veining is not a weakness in the stone and it cannot be stated that this is a fault.

**Material name:** RAJA BLACK (!!)  
**Stone type:** Limestone  
**Country of origin:** India  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Very fine-grained sedimentary limestone with basic grey-black colour. Mainly used for patios or driveways.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** Raja Black is frost resistant, but will be very quickly subject to weather discolouration when used outdoors.

**Material name:** SIMYRA (!!)  
**Pseudonyms:** Sumrah  
**Stone type:** Limestone  
**Country of origin:** Lebanon  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Hard beige limestone from the Middle East that is suitable for kitchens, bathrooms and terraces.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** This material contains small holes that can be filled up during grouting. This phenomenon is inherent to the material and therefore it cannot give rise to any complaints afterwards. Before the grouting it is important to clean the tiles thoroughly and to slightly wet them afterwards. It is also recommended to grout small surfaces at a time and to clean the tiles immediately afterwards taking extra care with the tile edges.

**Material name: SINAI PEARL (!!)****Stone type:** Limestone**Country of origin:** Egypt**Wear resistance:** ③ Medium - suitable for domestic and light commercial use - sealing recommended.**Typical appearance:** Beige background with natural glass and/or quartz veins and sometimes many fossils.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** Before the grouting it is important to clean the tiles thoroughly and to slightly wet them afterwards. It is also recommended to grout small surfaces at a time in order to avoid a cement film. This natural stone contains lime and must therefore be treated or cleaned with a acid-free product.

**Material name:** TANDUR GREY (!!)  
**Stone type:** Limestone  
**Country of origin:** India  
**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.  
**Typical appearance:** Hard limestone with grey background and colour variations.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** It is possible that the surface scales off after being cleaned a few times; this ends once the hard core of the stone has been reached. This natural stone contains lime and must therefore be treated or cleaned with a acid-free product.

**Material name: VINH BLUE (!!)**

**Stone type:** Limestone

**Country of origin:** Vietnam

**Wear resistance:** ④ Good - suitable for domestic and commercial use - sealing recommended.

**Typical appearance:** Crystallised limestone with a blue-grey colour. The individual crystals are small but still visible.

!! Please be advised that this material can have size tolerances of -2 mm up to +2 mm in thickness, size and squareness depending upon the size of the tiles.

**Special notes:** This natural stone contains lime and must therefore be treated or cleaned with a acid-free product. In Vinh Blue there are fine pencil linings that may appear shortly after laying. Those veinings are a normal natural phenomenon and it cannot be stated that this is a fault.

## GLOSSARY - FINISHES

<b>Antico</b>	Tiles are turned around in a tumbling machine filled with ceramic pebbles. This gives the appearance of old tiles worn by time with a natural patina.
<b>Aquaflamed</b>	The tile is first treated with water at high pressure (hydrojet) and the brushed, to accentuate the intense natural colour of the stone.
<b>Bouchardino</b>	The surface of the stone is bush hammered then brushed, to give the stone a relatively smooth textured surface.
<b>Brossato</b>	Tiles have the diamond cut surface made smoother with the aid of brushes under high pressure. This light textured finish is relatively anti-slip.
<b>Bush Hammered</b>	The stone is worked with a bush hammer to create small wells in the surface. This gives the stone a rough and non-slip surface.
<b>Chiselled</b>	Grooves are drawn parallel or slightly oblique to the edges of the tiles. This operation gives the stone a rough and non-slip surface.
<b>Convento</b>	Random lengths of natural stone with a fixed width of 20cm and an antiqued finish.
<b>Diamond Cut</b>	The raw stone is cut into unfinished slabs. The type of saw that is used determines whether parallel ridges or circular strokes can be seen on the surface.
<b>Enodesign</b>	Unique anti-slip surface made up of numerous minute off-white points on a grey background, as though very finely hammered.
<b>Enoluce</b>	The first matte and dark finish in blue stone that can be used outside, to bring out the striking mineral complexity of Belgian blue limestone.
<b>Enopasso</b>	Old-style Belgian blue paving for a contemporary setting: dark grey to satiny black colour with an aged patina and particularly soft to the touch.
<b>Enopure</b>	Contemporary Belgian blue flagstones, nuanced light grey with blue lines. Smooth texture with saw marks which will soften over time.
<b>Enoskin</b>	A beautiful, light, homogeneous grey which is slightly grainy but with a soft and structured appearance with anti-slip properties.
<b>Enostyl (Dark/Light)</b>	Grey tiles with an aged patina, worn edges and corners slightly broken. A reminder of flagstones in old castles and churches.
<b>Enotouch</b>	A deep grey blue finish bringing out the stone's shells and crinoids, with a smooth and soft surface for a satin-like appearance.
<b>Flamed</b>	The surface is brought into contact with flames then immediately cooled with water. The temperature shock gives the stone a fractured, non-slip texture.
<b>Gelido</b>	Unique surface treatment in which the tile retains its rough edge but with a surface that is nonetheless relative flat (anti-slip effect).
<b>Hand Cleft</b>	Rough and natural looking. Cleaving the stones by hand reveals the original aspect of the stone visible - big flakes, cavities and bulges of various shapes.
<b>Hand Honed</b>	The saw marks from diamond cutting are removed by rubbing the surface with sand and water. The surface can still contain some fine visible saw marks.
<b>Henegouwen Antic</b>	Old fashioned and warm flagstones with a worn and trammelled appearance, slightly irregular texture and slightly broken corners.
<b>Heritage</b>	Tiles are half hand honed, so that some roughness is retained, then brushed. This aged effect gives the flooring a used look and breathes authenticity.
<b>Honed</b>	Surfaces are fine rubbed using different grades of abrasives under factory conditions. The surface is smooth and matt without visible grooves.
<b>Klinkstone</b>	Warm and old-fashioned with a slightly irregular texture and slightly broken corners, a reminder of old castles and abbeys.
<b>Natural Cleft (riven)</b>	A finish achieved when layered stones (usually slate or sandstone) are split, or cleft, leaving a naturally rough surface which is uneven and varied.
<b>Polished</b>	Machined with fine abrasives to give a reflective surface showing strong colours. The degree of polishing is determined by the mineral elements in the stone.
<b>Sabbiatino</b>	The surface is worked with a very fine bush hammer, then brushed, to give the stone a relatively smooth textured surface.
<b>Sablino</b>	The surface is honed or hand honed, then sandblasted under high pressure, then lightly brushed. This gives a semi-rough finish which feels very natural.
<b>Satino</b>	Tiles are first hand honed and flamed, then brushed. This semi-rough finish is relatively antislip, with easy maintenance and less sensitivity to scratches.
<b>Scraped</b>	The surface is hand honed with water only. This gives a darker finished surface than normal hand honing (which is with the aid of sand or a diamond).
<b>Sensato</b>	Fine structure obtained by mechanical treatment. The smooth structure makes it pleasant to the touch.
<b>Shotblasted</b>	The surface is blasted with fine metal fragments under high pressure and afterwards lightly brushed. This creates a rough look.
<b>Skintouch</b>	Tiles are brushed under factory conditions, to give the surface a light textured feel like leather.
<b>Stonewashed</b>	The stone is treated in a bath of ceramic chips. The scouring effect rounds off the sharp edges and gives the surface a rich patina.
<b>Versailles</b>	The surfaces of the tiles are hand honed and brushed, then the edges are milled to give a rustic appearance.
<b>Vieux Manoir</b>	The surface of the tile is rustically distressed by a combination of hand honing, milling and brushing. The edges are highly distressed.
<b>Vintage</b>	First the tile is lightly scoured, then it is aged using a roller washing system.

## GLOSSARY - PRODUCT FORMATS

<b>Barrettes</b>	Rough pieces of riven or tumbled slate, which can be stacked to form wall cladding with the look of dry stone walling.
<b>BELDECO Tiles</b>	Small square tiles (19.7 x 19.7 cm) available in a range of materials and finishes to create retro vintage floor patterns.
<b>BELTRACER Tiles</b>	A top ± 4 mm layer of natural marble is bonded onto an 8mm thick composite underground. These tiles have a small bevel at the edges.
<b>BELTRALINE Tiles</b>	A range of thin calibrated stone tiles. Thinner tiles are lighter, therefore easier to transport and lay. This also allows large format tiles to be fitted on thin substrates.
<b>BELTRALINEA Strips</b>	A range calibrated natural stone strips for wall cladding. Available in widths of 5cm, 7cm and 14cm, the strips can be fitted in a number of decorative patterns.
<b>BELTRALINEA 3D</b>	Strips are supplied in 3 widths (5cm/7cm/14cm) and 3 thicknesses (1cm/1.5cm/2cm) to allow an interesting multi-depth pattern to be created on a wall.
<b>Minipanel</b>	Thin strips of natural cleft stone (1.2cm to 2cm thick) are bonded together into single units for wall cladding.
<b>Mosaics</b>	Small pieces of 1cm thick stone glued onto a mesh backing. Up to 9 patterns are available, suitable for both classic and contemporary settings.
<b>Old Paving Stone</b>	Thick paving stones with a distressed or worn look, ideal for creating natural looking patios, paths or driveways.
<b>Paving Stones (Setts)</b>	Small square or rectangular quarried stones, formerly used for paving roads, now used as decorative stones in landscape architecture.
<b>Random Lengths</b>	Tiles are supplied in a fixed width but in random lengths. The lengths generally fall within a range of 40cm to 80cm, but this can vary for different products.
<b>Rockpanels</b>	Rough pieces of natural stone bonded to a concrete panel to give any wall or façade the look of stacked stones.
<b>Roman Pavement</b>	Tiles are supplied in a set pattern (available on request). Orders must be placed in complete modules.
<b>Skirting</b>	Most floor tiles can be supplied with 7cm high skirting in the same material, for a perfect finish. The top edge is finished.
<b>Standard Pieces</b>	Finished on all sides - generally used for kerbing.
<b>Stonepanels</b>	Pieces of natural cleft stone (1.2cm to 2cm thick) are bonded together into single units for wall cladding.
<b>Stoneskin</b>	Pieces of rough stone (1.5cm to 3cm thick) are bonded together into single units for wall cladding.
<b>Tiles</b>	Standard (non-calibrated) tiles. Most tiles have straight sawn edges unless specified otherwise, or unless supplied in an aged finish (e.g. Antico).
<b>Wall Tiles</b>	1cm thick tiles with bevelled edges, specially designed for fixing to walls in kitchens or bathrooms.
